Cut and Finish: £14.50
Childs Cut: £8.50
Beard Trim: £8.50
Razor Design: £12.50
Colours by quotation

Basic Task (level 1):

This week Dave has cut 27 people's hair. 14 were dry cuts, 8 wet cuts, 2 cut and finishes, 1 child's cut, 1 beard trim and 1 razor design.

1. Use a spreadsheet to work out Dave's income for the week.

Dave's costs for each week are usually £250.

2. Work out if Dave made a profit or not.
3. Make the profit automatically turn red if there's a loss
4. Draw a graph on the sheet to show how many of each type of job Dave did in the week

Advanced Task (level 2):

5. A suitable automatic message should appear to tell Dave if he made a profit or a loss.
6. Format the spreadsheet so that it's suitable for purpose.
 - Include the name and address and a suitable image
 - Make suitable use of colour
 - Make sure it will print on one page
 - Get the date to appear automatically
 - Make sure that Dave can only enter data into the cells he needs to in case Mike, his apprentice, makes a mistake and deletes all the formulas
 - Include any other features you feel would make the spreadsheet more fit for purpose
