A mood board is a **pre-production document**.

They are made during the **planning stage** of a product's development.

They are a <u>visual tool</u> used as a way of exploring the **theme** of a project and how it might **look** and **feel**.

Possible **audiences** for mood boards are shown **in bold** on the right

Purposes:

- develop visual ideas for how a project might look or feel
- let designers share ideas about the look or feel of a project
- to show the **client** how a project might look or feel
- show ideas for colour schemes to the client and project team
- share ideas about fonts that could be used
- collect ideas for part of a project

Mood Boards

Mood boards are **visual tools**

Mood boards are <u>not</u> perfectly organised. They should be ideas "thrown" at the board Source: Thea N on Flickr (https://www.flickr.com/photos/neu4bauer/4477802538) - creative common sharealike license

Source: Aminabell on Wikimedia Commons (https://commons.wikimedia.org/wiki/File:Moodboard.jpg) - creative common attribution share alike license

Mood boards can include labels or annotations where needed to help explain ideas

Mood boards might include:

- colours
- font samples
- images/photos/pictures or sketches
- **keywords** or **quotes**
- logos
- title
- annotations
- sounds or video on a digital mood board
- **textures** (e.g. fabrics) on a physical mood board

Mood Boards

Mood boards can be produced as:

- physical products
- digital products

A physical product is something you create on paper or that you can touch.

A digital product is something produced directly on a computer.

This physical mood board includes textile samples and post-it notes.

Many printers include scanners.

Physical mood boards:

One way to produce a mood board is on paper or a pinboard, using images or samples stuck down.

To get this on to a computer (and convert it into a **digital document**) you can:

- scan it using a scanner
- take a photograph of it using a digital camera (e.g. on your phone)

Hardware that could be used includes:

- mouse
- keyboard
- monitor (screen)
- touch screen (e.g. phone or tablet)
- graphics tablet

Digital mood boards:

These can be made using:

- Office software such as Word or PowerPoint
- A graphics package (e.g. Paint or Photoshop)
- An online tool (e.g. Google Docs or <u>Milanote</u>). These have the advantage that people can work together and they can easily be shared

Summary:

- are a visual tool
- all about the "mood" of the project
- produced in the design stage
- show how a project might "look" or "feel" and give ideas for the experience users might have
- help to make decisions about content and look of products
