

# Resample in PhotoPaint

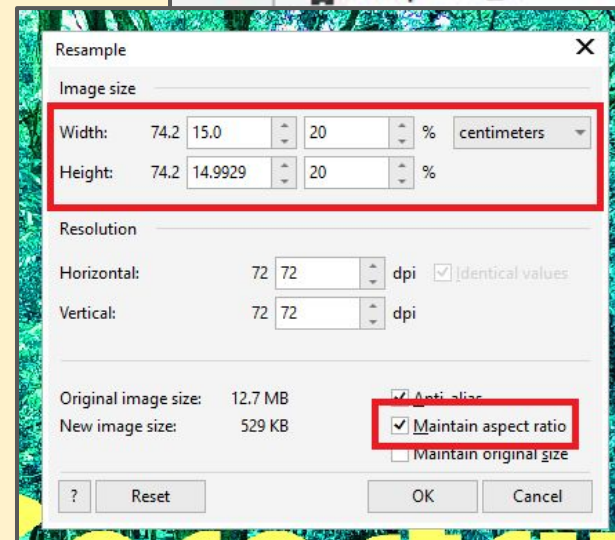

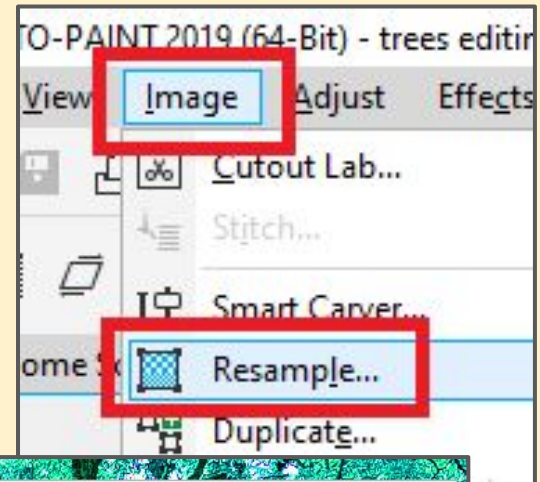

1. Open your image in PhotoPaint (**File > Open**)

2. Click **Image > Resample**

3. Make sure **Maintain aspect ratio** is ticked at the bottom

4. Change the **width**

5. Click in **height** – it should change > click **OK**

Change the units to help you make a choice for height and width

**Save** your image with a **new name** after resampling

Don't forget you'll need to **export** a final version, probably as a JPEG
