Using buttons

This is how you use buttons in micro:python:

```
1   # Buttons program
2   from microbit import *
3
4   while True:
5       if button_a.is_pressed():
6           display.show(Image.HEART)
7         #don't show a heart!!!
8
9       if button_b.is_pressed():
10          #code here
11
```

Indenting the code is **really** important to get right…
