

# CD Cover – multiple colours

This came from someone asking “how can I get the sky purple?”

1. Open **PhotoPaint** – press **Alt + S** to get rid of the pop up
2. Click **File > Open** > find the image you want to use and open it
3. **IMPORTANT:** make sure you square crop your image first
4. On the **right panel**, make sure you are clicked on **Objects**  
If you lose the right panel, click **Window > Dockers > Objects** to get it back

## **Step 1 – select the sky and split it off into a new layer**

5. On the **left toolbar**, find the **Rectangle Mask Tool** towards the **top**  
**Mask Tool** towards the **top**
6. **Click and hold** on the **Rectangle Mask** to pop up a set of tools that are hidden underneath
7. Choose the **Magic Wand Mask Tool**  
This is the tool that's easiest to use to select areas of an image

8. With the Magic Wand Mask Tool selected, click **once** somewhere on the sky  
This selects **part** of the sky – you'll see an area of dashed lines (“**marching ants**”)

9. **IMPORTANT:** Hold **SHIFT** down on the keyboard and **click** on another part of the sky that's not selected.  
This adds to the area that's selected

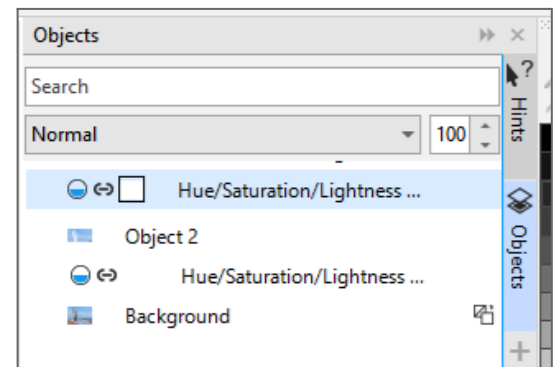

10. **Keep adding** until all of the sky is selected
11. You can also hold **CONTROL** and **click to remove** any part that accidentally gets selected – this can be quite tricky to do. **Be patient!**

If it all goes wrong, click **Mask > Remove mask** and start over

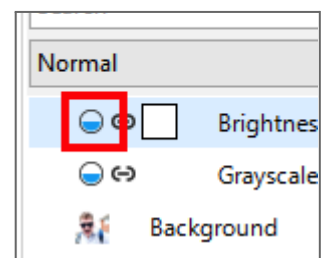

12. Once **all** the sky is selected, click **Object > Create > Copy from Mask**
13. This splits the sky off into a new layer called something like **Object 1**. Look on the **right panel** to see that it's there, sitting **above** the Background layer

## Step 2 – use hue and saturation

14. At the top, click **Object > Create > New Lens**
15. Choose **Hue/Saturation/Lightness > OK**
16. Use the **Hue** slider to change the colour
17. Then try turning the **Saturation** up a bit as well
18. Click **OK** when you're done
19. **IMPORTANT:** On the right panel, click on the **bottom layer** – it should be called **Background**. When you're clicked on it you'll see it highlighted in blue
20. Now add a new **Hue/Saturation/Lightness** layer and change the **Hue** again  
This only changes the colour of the land section, not the sky
21. You might want to change the **Saturation** as well
22. Click **OK**
23. The layers should stack like in the screenshot

24. Use the **lens symbols** to the left of the layers to change the position of any sliders

**Once you're done, make sure to save your work before adding text**
