

CD Cover – selective colour

This is about picking out individual areas of colour

1. Open **PhotoPaint** – press **Alt + S** to get rid of the pop up
2. Click **File > Open** > find the image you want to use and open it
3. **IMPORTANT:** make sure you square crop your image first
4. On the **right panel**, make sure you are clicked on **Objects**
If you lose the right panel, click **Window > Dockers > Objects** to get it back

Picking out colour areas

5. At the **top**, click **Object > Create > New Lens > Grayscale > OK > OK**
6. On the **left toolbar**, switch to the **Brush Tool** – the single brush underneath the Text Tool
7. At the **top**, change the size of the brush:

- start by changing the **brush**

type to **Round 100** – this brush has a **hard edge** – that's what we want

- at the **top**, change the size up to **200** to start with (it's quicker to type it)

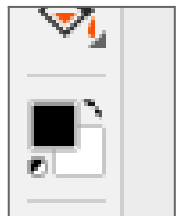

8. At the **bottom** of the **left toolbar** is a colour selector. Make sure Black is on top

IMPORTANT: if white is on top, use the **double headed arrow** to switch to black. You can **double click** to pick a colour as well

VERY IMPORTANT: you only use black and white brushes for this task

9. Now, on the **Grayscale layer**, start **painting** over the top of the image. This will **reveal** the colour beneath

Don't worry too much about the edges – we can correct those afterwards

Correcting mistakes

10. Switch the **brush colour** to **white** – use the **double headed arrow** at the **bottom** of the **left toolbar**
11. Make the brush **smaller** (try 50). **Zooming in** might help here as well
12. **Paint** over the mistakes – the white brush **conceals** the colour

Once you're done, make sure to save your work before adding text
