- Learn how to edit images for a purpose

Start by:

1. Open your gallery from last time
2. Check that your work has been added to it – if necessary, open your work in PhotoPaint and export it before adding it
3. Check you've added words to your gallery to describe what you did
4. Look at **someone else's work**: tell that what you **like** about it and give them **up to three things** to improve. Make at least **one improvement** to your own work based on **feedback**
