How computers work

A computer is a machine which **stores**, **processes** and **presents** data

How computers work

A computer is a machine which **stores**, **processes** and **presents** data

People can **input** things into a computer.

How computers work

A computer is a machine which stores, processes and presents data

Store data	Process data	Present data
Store photos	Calculate your score in a game	Play music

How computers work

Storing data - things they remember

Processing data - things they change, including calculations and converting information

Presenting data - ways they tell you something

Inputting data - getting data in to the computer somehow
